

**Math I UNIT 5 OVERVIEW: Quadratic Functions**

<b>Unit Outcomes</b> At the end of this unit, your student should be able to:	<b>Key Vocabulary</b> Terms to deepen the student's understanding
<ul style="list-style-type: none"> <li>• Use function notation to evaluate a quadratic function given a value in the domain.</li> <li>• Interpret the contextual meaning of a given point from a quadratic function in function notation.</li> <li>• Interpret the meaning of the independent and dependent variables in context of a quadratic function.</li> <li>• Interpret contextual significance of the domain and range of a quadratic function</li> <li>• State the domain and range of a quadratic function from its graph.</li> <li>• Interpret and analyze key features of a quadratic function in context including positive/negative, increasing/decreasing, intercepts, maximum/minimum and domain/range when given the function as a table, graph, and/or verbal description.</li> <li>• Use mathematical reasoning to justify a chosen solution method for a quadratic equation.</li> <li>• Use mathematical reasoning to justify each step of the solving process for a quadratic equation.</li> <li>• Identify the terms, factors and coefficients of a quadratic expression.</li> <li>• Interpret the terms, factors and coefficients of a quadratic expression in terms of the context.</li> <li>• Create an equation in two variables to represent a quadratic relationship between two quantities.</li> <li>• Graph a quadratic equation that represents a relationship between two quantities.</li> <li>• Choose an appropriate domain and range for a quadratic function.</li> <li>• Identify the maximum and minimum of quadratic functions.</li> <li>• Identify where a quadratic function is increasing and decreasing.</li> <li>• Compare two quadratic functions symbolically, graphically, verbally, and using tables.</li> <li>• Compare linear and quadratic functions symbolically, graphically, verbally, and using tables.</li> <li>• understand that the x-intercepts/solutions/zeros/roots can be determined by factoring for some quadratic functions.</li> <li>• Build a quadratic function by multiplying linear equations and combining two quadratic equations with addition and subtraction.</li> </ul>	<ul style="list-style-type: none"> <li>• Axis of Symmetry</li> <li>• Binomial</li> <li>• Constant</li> <li>• Degree of a Monomial</li> <li>• Degree of a Polynomial</li> <li>• Difference of Squares</li> <li>• Extreme Values</li> <li>• Factoring</li> <li>• Initial Height</li> <li>• Initial Velocity</li> <li>• Intercepts</li> <li>• Intervals where increasing, decreasing, positive or negative</li> <li>• Linear Expression</li> <li>• Monomial</li> <li>• Parabola</li> <li>• Polynomial</li> <li>• Relative Maximum or Minimum</li> <li>• Roots</li> <li>• Solutions</li> <li>• Standard Form of a Polynomial</li> <li>• Symmetry</li> <li>• Trinomial</li> <li>• Vertex</li> <li>• x-intercepts of a Quadratic Function</li> <li>• Zeros</li> </ul>

**Math I UNIT 5 OVERVIEW: Quadratic Functions**

<b>Key Standards Addressed</b> Connections to Common Core/NC Essential Standards	<b>Where This Unit Fits</b> Connections to prior and future learning
<p><b>NC.M1.A-SSE.1</b> Interpret expressions that represent a quantity in terms of its context.</p> <p>a. Identify and interpret parts of a linear, exponential, or <b>quadratic</b> expression, including terms, factors, coefficients, and exponents.</p> <p>b. Interpret a linear, exponential, or <b>quadratic</b> expression made of multiple parts as a combination of entities to give meaning to an expression.</p> <p><b>NC.M1.A-SSE.3</b> Write an equivalent form of a quadratic expression, <math>ax^2 + bx + c</math>, where <math>a</math> is an integer, by factoring to reveal the solutions of the equation or the zeros of the function the expression defines.</p> <p><b>NC.M1.A-APR.1</b> Build an understanding that operations with polynomials are comparable to operations with integers by adding and subtracting quadratic expressions and by adding, subtracting, and multiplying linear expressions.</p> <p><b>NC.M1.A-APR.3</b> Understand the relationships among the factors of a quadratic expression, the solutions of a quadratic equation, and the zeros of a quadratic function.</p> <p><b>NC.M1.A-CED.2</b> Create and graph equations in two variables to represent linear, exponential, and quadratic relationships between quantities.</p> <p><b>NC.M1.A-REI.1</b> Justify a chosen solution method and each step of the solving process for linear and <b>quadratic</b> equations using mathematical reasoning.</p> <p><b>NC.M1.A-REI.4</b> Solve for the real solutions of quadratic equations in one variable by taking square roots and factoring.</p> <p><b>NC.M1.A-REI.11</b> Build an understanding of why the <math>x</math>-coordinates of the points where the graphs of two linear, exponential, and/or quadratic equations <math>y = f(x)</math> and <math>y = g(x)</math> intersect are the solutions of the equation <math>f(x) = g(x)</math> and approximate solutions using graphing technology or successive approximations with a table of values.</p> <p><b>NC.M1.F-IF.2</b> Use function notation to evaluate linear, <b>quadratic</b>, and exponential functions for inputs in their domains, and interpret statements that use function notation in terms of a context.</p>	<p><b>Coming into this unit, students should have a strong foundation in:</b></p> <ul style="list-style-type: none"> <li>• Solving one variable equations</li> <li>• Graphing linear functions</li> <li>• Linear and exponential functions</li> <li>• Finding the GCF of integers</li> <li>• Combining like terms</li> <li>• The Distributive Property</li> <li>• Identifying key features of a function from a graph</li> </ul> <p><b>This unit builds to the following future skills and concepts:</b></p> <ul style="list-style-type: none"> <li>• Factoring quadratic equations with a leading coefficient other than one</li> <li>• Graphing and analyzing more complex functions (including inverse, step, exponential, absolute value, trigonometric and logarithmic functions)</li> </ul>

**Math I UNIT 5 OVERVIEW: Quadratic Functions**

**NC.M1.F-IF.4** Interpret key features of graphs, tables, and verbal descriptions in context to describe functions that arise in applications relating two quantities, including: intercepts; intervals where the function is increasing, decreasing, positive, or negative; and maximums and minimums.

**NC.M1.F-IF.5** Interpret a function in terms of the context by relating its domain and range to its graph and, where applicable, to the quantitative relationship it describes.

**NC.M1.F-IF.6** Calculate and interpret the average rate of change over a specified interval for a function presented numerically, graphically, and/or symbolically.

**NC.M1.F-IF.7** Analyze linear, exponential, and quadratic functions by generating different representations, by hand in simple cases and using technology for more complicated cases, to show key features, including: domain and range; rate of change; intercepts; intervals where the function is increasing, decreasing, positive, or negative; maximums and minimums; and end behavior.

**NC.M1.F-IF.8** Use equivalent expressions to reveal and explain different properties of a function.

a. Rewrite a quadratic function to reveal and explain different key features of the function

**NC.M1.F-IF.9** Compare key features of two functions (linear, quadratic, or exponential) each with a different representation (symbolically, graphically, numerically in tables, or by verbal descriptions).

**NC.M1.F-BF.1** Write a function that describes a relationship between two quantities.

b. Build a function that models a relationship between two quantities by combining linear, exponential, or quadratic functions with addition and subtraction or two linear functions with multiplication.

**NC.M1.F-LE.3** Compare the end behavior of linear, exponential, and quadratic functions using graphs and tables to show that a quantity increasing exponentially eventually exceeds a quantity increasing linearly or quadratically.
